Job Posting

Senior Data and Research Analyst

Company:

Site Selection Group is a leading, independent location advisory and economic incentives firm that provides solutions to corporations and communities across the world. Our mission is to align the needs of corporations with the optimal locations in order to provide the absolute maximum economic benefit. For additional information, please visit our website at www.siteselectiongroup.com.

Position:

Site Selection Group is seeking to hire an experienced research analyst to support the company's rapidly growing location consulting efforts. This position is largely technical in nature and works extensively with geographic data. The Senior Data & Research Analyst will work directly with SSG project managers to develop solutions to complex client challenges.

Responsibilities:

- Lead research efforts for corporate, retail, and economic development consulting projects
- Manage critical geographic databases
- Provide GIS mapping capabilities
- Conduct predictive modeling and complex statistics analysis
- Perform primary research activities including the solicitation of information from third parties
- Develop client deliverables and effectively communicate the results of analyses
- Responsible for data and software procurement

Qualifications:

- 2-5 years of experience in statistical analysis, location consulting, or geographic information sciences
- Bachelor's degree in geography, statistics, mathematics, or economics is preferred
- Experience with predictive modeling and/or econometrics is preferred
- Mastery of Microsoft Excel and proficient in Microsoft PowerPoint
- Experience with GIS software platforms
- Basic understanding of tax, real estate, and economic development principles
- Ability to utilize unfamiliar data and methods, think critically, and problem solve
